Notion Productivity System: 7 Ready-to-Build Templates

Welcome to your comprehensive guide for building a robust, interconnected productivity ecosystem

within Notion. This system is designed to move beyond isolated to-do lists and into a unified workflow where your goals, tasks, knowledge, and habits reinforce one another. Follow the instructions below to construct each of the seven core templates, ensuring you understand the specific database properties, view configurations, and linking strategies required for seamless integration.

1. The Personal Dashboard

The Personal Dashboard is not a database itself, but a page that serves as the entry point to your entire system. Its purpose is immediate visibility and quick access.

****Structure & Setup:****

Create a new page titled "Home." Use the `/button` command to create clickable buttons for each of

the six other modules described below. This allows for one-click navigation.

- * ****Quick Add Section:**** Add a toggle or a simple text block where you can jot down immediate thoughts without navigating to the Second Brain.

- * ****Today's Focus:**** Embed a filtered view of your Task Manager (described in Section 2) that shows only tasks with the "Due Date" set to today.

- * ****Habit Snapshot:**** Embed a view of the Habit Tracker (Section 4) showing only habits marked as "Completed" for the current day.

- * ****Upcoming Deadlines:**** Embed a calendar view of Projects (Section 2) sorted by "End Date."

****Linking Strategy:****

This page does not contain its own database. It acts as a hub, pulling data via embedded views from

the other six databases. Ensure every other database has a "Dashboard" relation property or simply

rely on the embedded views to keep the dashboard dynamic.

2. Task + Project Manager

This is the operational core of your system. It combines project-level oversight with granular task execution.

****Database Properties:****

Create a database titled "Projects & Tasks."

- * ****Name:**** Text (Project or Task Title).
- * ****Status:**** Select (Not Started, In Progress, Blocked, Done, Cancelled).
- * ****Priority:**** Select (Low, Medium, High, Urgent).
- * ****Due Date:**** Date.
- * ****Parent Project:**** Relation (Self-relation). This allows tasks to be nested under projects.
- * ****Assignee:**** Person (if using team features) or Select (Me, Delegated).
- * ****Tags:**** Multi-select (e.g., Work, Personal, Health, Finance).
- * ****Estimate:**** Number (Time in hours or points).

****Views to Create:****

1. ****Board View (Kanban):**** Grouped by "Status." Use this for daily flow management.
2. ****Calendar View:**** Filtered to show only items where "Parent Project" is empty (top-level projects) or specific dates.
3. ****List View (All Tasks):**** Filtered to show "Parent Project" is empty. This lists only top-level projects.
4. ****List View (My Tasks):**** Filtered by "Assignee" = Me and "Status" =? Done. Sort by "Due Date."

****Linking Strategy:****

Use the "Parent Project" self-relation. When creating a task, search for the parent project name to link them. This creates a hierarchy: Projects contain Tasks. In your Project detail page, add a linked view of Tasks filtered to show only those with that specific Parent Project.

3. Second Brain / Note Vault

This is your knowledge repository. It should be structured for retrieval, not just storage.

****Database Properties:****

Create a database titled "Knowledge Base."

- * ****Title:**** Text.
- * ****Type:**** Select (Idea, Article, Meeting Notes, Research, Book Notes).
- * ****Status:**** Select (Inbox, Processing, Archived).
- * ****Tags:**** Multi-select (e.g., Marketing, Tech, Personal Growth).
- * ****Related Project:**** Relation (to "Projects & Tasks" database).
- * ****Source:**** URL (for articles or videos).
- * ****Created:**** Date.

****Views to Create:****

1. ****Inbox View:**** Filtered by "Status" = Inbox. This is where all new notes land initially.
2. ****Active View:**** Filtered by "Status" = Processing.
3. ****Gallery View:**** Grouped by "Type." Useful for visual browsing of research or ideas.

****Linking Strategy:****

The critical link is the "Related Project" property. When you take notes during a project, link the note to that project. This ensures that all context related to a specific initiative is accessible from the Project page. Add a "Knowledge" section to your Project template page that embeds a view of the Knowledge Base filtered by the current Project ID.

4. Habit Tracker

This module focuses on consistency and long-term behavior change.

****Database Properties:****

Create a database titled "Habits."

- * ****Habit Name:**** Text.
- * ****Frequency:**** Select (Daily, Weekly, Monthly).
- * ****Target:**** Number (e.g., 30 minutes, 1000 words).
- * ****Category:**** Select (Health, Mindfulness, Productivity).
- * ****Log:**** Checkboxes or a formula-based counter (see below). **Simplest approach:** Create a separate "Daily Log" database or use a table inside the Habit page for manual entry. For automation, use a "Last Completed" Date property.
- * ****Streak:**** Formula (Calculated based on Last Completed date).

****Views to Create:****

1. ****Table View:**** Shows all habits with their current status.
2. ****Gallery View:**** One card per habit. Inside each card, include a simple checklist or a linked view of completions for the current month.

****Linking Strategy:****

Keep this somewhat isolated for clarity, but add a "Related Goal" property if you have a Goals database. If not, link habits to "Projects" if they support a specific initiative (e.g., "Read 10 pages" linked to "Finish Book X" project).

5. Content Calendar

For creators, marketers, or writers, this template manages the flow of information.

****Database Properties:****

Create a database titled "Content Pipeline."

- * ****Title:**** Text.
- * ****Platform:**** Select (Blog, Newsletter, Twitter, LinkedIn, YouTube).
- * ****Status:**** Select (Ideation, Drafting, Editing, Scheduled, Published).
- * ****Publish Date:**** Date.
- * ****Content Type:**** Select (Article, Video, Image, Thread).
- * ****Related Note:**** Relation (to "Knowledge Base").
- * ****Related Project:**** Relation (to "Projects & Tasks").

****Views to Create:****

1. ****Calendar View:**** Filtered by "Publish Date." Grouped by "Platform."
2. ****Board View:**** Grouped by "Status."
3. ****Table View (Ideas):**** Filtered by "Status" = Ideation. Sort by "Created" descending.

****Linking Strategy:****

This is heavily dependent on the Second Brain. Every piece of content should be linked to a "Related Note." This ensures you are creating content based on researched material. Also, link to the "Projects & Tasks" database to track the workload associated with content production.

6. Reading List with Notes

A dedicated space for consuming and processing literature.

****Database Properties:****

Create a database titled "Reading List."

- * ****Title:**** Text.
- * ****Author:**** Text.
- * ****Status:**** Select (Want to Read, Reading, Finished, Abandoned).
- * ****Rating:**** Select (1-5 stars).
- * ****Start Date:**** Date.
- * ****Finish Date:**** Date.
- * ****Notes:**** Relation (to "Knowledge Base"). *Crucial:* When you start a book, create a note in the Knowledge Base with Type = Book Notes, and link it here.
- * ****Tags:**** Multi-select (Fiction, Non-Fiction, Business, Science).

****Views to Create:****

1. ****Table View (Current):**** Filtered by "Status" = Reading.
2. ****Gallery View (Library):**** Grouped by "Status." Shows covers (if added) and ratings.
3. ****List View (Upcoming):**** Filtered by "Status" = Want to Read.

****Linking Strategy:****

The bridge is the "Notes" property. By linking a Reading List entry to a Knowledge Base note, you ensure that insights from the book are searchable and retrievable in your Second Brain. Add a "Books" section to your Personal Dashboard that embeds the "Current" view.

7. Weekly Review System

This is a ritual, not just a database. It requires a template page.

****Structure & Setup:****

Create a page titled "Weekly Review." Create a template within this page that includes:

1. ****Wins:**** A bulleted list to capture successes.
2. ****Lessons Learned:**** A bulleted list for failures and adjustments.
3. ****Task Cleanup:**** A linked view of "Projects & Tasks" filtered by "Status" = In Progress AND "Due Date" < Today. *Action:* Mark these as done, reschedule
