

Notion Freelancer Dashboard: 5 Client + Project Templates

RenWork Digital Products

Introduction: Your Freelance Command Center

Welcome to the master guide for the **Notion Freelancer Dashboard**. This is not just a set of five isolated databases; it is a systemic ecosystem designed to eliminate the "where did I put that file?" anxiety and the "did I bill for this?" regret. By building these five interconnected templates, you create a single source of truth for your business. Follow this guide step-by-step to construct a robust, scalable workspace that handles client relationships, project execution, financial tracking, time management, and asset storage seamlessly.

Template 1: Client CRM

The Client CRM is the foundation of your network. It centralizes who you work with and where they stand in your business lifecycle.

Database Properties:

- Name:** Title property. The official name of the company or individual.
- Status:** Select property. Options: *Prospect, Active, Inactive, Lost*.
- Tier:** Select property. Options: *Premium, Standard, Basic*. This helps you segment effort and pricing.
- Contact Person:** Text property. The primary point of contact's name.
- Email/Phone:** Text property. Combine these or use separate text fields for clarity.
- Hourly Rate:** Number property. Set the format to Currency. This is your baseline for quoting.
- Contract Signed:** Checkbox property. Toggle this on only when a signed agreement is in your possession.

8. **Linked Projects**: Relation property. Link to the **Project Tracker** database (Template 2).

Views to Create:

- * **Active Clients**: A Table view filtered where **Status** is **Active**. Sort by **Name**.
- * **Pipeline**: A Board view grouped by **Status**. This gives you a visual funnel of prospects moving to active clients.
- * **By Tier**: A Table view grouped by **Tier**. Use this to quickly assess your revenue mix (e.g., do you have too many Basic clients?).

Automation Ideas:

Use Notion's "Buttons" feature. Create a button labeled "Onboard New Client" that automatically

sets **Status** to **Active**, checks **Contract Signed**, and prompts you to create a linked Project in Template 2.

Template 2: Project Tracker

This is the operational heart of your dashboard. Every piece of work you do should live here.

Database Properties:

1. **Project Name**: Title property.
2. **Client**: Relation property. Link to **Client CRM** (Template 1). **Crucial**: Ensure this is a two-way relation.*
3. **Status**: Select property. Options: **Not Started**, **In Progress**, **Review**, **Completed**, **On Hold**.
4. **Deadline**: Date property.
5. **Deliverables**: Multi-select property. E.g., **Copy**, **Design**, **Code**, **Video**.
6. **Invoiced**: Checkbox property.
7. **Paid**: Checkbox property.

Views to Create:

- * **Active by Deadline**: A Table view filtered where **Status** is not **Completed**. Sort by **Deadline** ascending. This is your daily priority list.
- * **Per Client**: A Gallery view grouped by **Client**. This allows you to see the scope of work for any specific client at a glance.
- * **Kanban Status**: A Board view grouped by **Status**. Drag and drop cards as work progresses.

Template 3: Invoice + Payment Log

Money management must be separate from project execution to ensure clarity.

****Database Properties:****

1. ****Invoice #****: Title property. Use a unique identifier (e.g., INV-2023-001).
2. ****Client****: Relation property. Link to **Client CRM** (Template 1).
3. ****Project****: Relation property. Link to **Project Tracker** (Template 2).
4. ****Amount****: Number property. Format as Currency.
5. ****Issue Date****: Date property.
6. ****Due Date****: Date property.
7. ****Status****: Select property. Options: **Draft, Sent, Paid, Overdue, Void**.
8. ****Payment Date****: Date property.

****Views to Create:****

- * ****Unpaid & Overdue****: A Table view filtered where **Status** is **Sent** or **Overdue**. Sort by **Due Date** ascending. Check this first thing in the morning.
- * ****By Client****: A Table view grouped by **Client**. Useful for reconciling accounts.
- * ****Monthly Income****: A Table view filtered by **Status** equal to **Paid**. Group by **Payment Date** (Month). Add a "Sum" aggregation on the **Amount** column to see your actual cash flow.

Template 4: Time Log

Accurate time tracking is how you prevent scope creep and ensure you are paid for your effort.

****Database Properties:****

1. ****Task/Description****: Title property. Briefly describe what you worked on.
2. ****Project****: Relation property. Link to **Project Tracker** (Template 2).
3. ****Start Time****: Date/Time property.
4. ****End Time****: Date/Time property.
5. ****Duration****: Formula property. Calculate the difference between End and Start in hours.
6. ****Billable****: Checkbox property. If a task is administrative or unpaid, leave this unchecked.

****Views to Create:****

- * ****By Project****: A Table view grouped by **Project**. Use this to verify if you are spending too much time on one project relative to its budget.
- * ****Weekly Total****: A Table view filtered by **Date** within the current week. Add a "Sum" aggregation on **Duration** to see your weekly hours.
- * ****Unbilled Hours****: A Table view filtered where **Billable** is true AND the linked **Project** has **Invoiced** set to false. This view flags potential lost revenue.

Template 5: Content and Deliverable Vault

Stop losing files in email threads. This database tracks every asset you create.

Database Properties:

1. **Asset Name**: Title property.
2. **Type**: Select property. Options: *PDF, Image, Video, Doc, Code Repo*.
3. **Project**: Relation property. Link to *Project Tracker* (Template 2).
4. **Status**: Select property. Options: *Draft, In Review, Approved, Delivered*.
5. **Version**: Number property. Increment this for each new draft.
6. **File Link**: URL property. Link to the file in your cloud storage (Dropbox, Drive, etc.).

Views to Create:

- * **By Project**: A Table view grouped by *Project*.
- * **Needs Review**: A Table view filtered where *Status* is *In Review*. This is your checklist for following up with clients for feedback.
- * **Delivered**: A Table view filtered where *Status* is *Delivered*. Keep this for your portfolio or past reference.

System Integration: Linking the Databases

The power of this dashboard lies in the **Relations**.

1. **Client ? Project**: In the *Client CRM*, the *Linked Projects* property must be the reverse relation of the *Client* property in the *Project Tracker*. This ensures that when you open a Client page, you see all their active projects.
2. **Project ? Invoice**: In the *Invoice Log*, link the *Project* property to the *Project Tracker*. Conversely, in the *Project Tracker*, you can add a *Related Invoices* relation to see all money tied to that specific project.
3. **Project ? Time Log**: Link the *Project* property in the *Time Log* to the *Project Tracker*.
4. **Project ? Vault**: Link the *Project* property in the *Vault* to the *Project Tracker*.

Rollups for Insight:

In the *Project Tracker*, add a **Rollup** property called "Total Hours Spent" that pulls from the *Time Log* database, summing the *Duration* property. Add another **Rollup** called "Total Invoiced" that pulls from the *Invoice Log*, summing the *Amount* property. This allows you to see, at a glance, if a project is profitable (Invoiced > Cost of hours).

The Daily Workflow

****Morning Open (10 Minutes):****

1. Open the ****Invoice Log**** view "Unpaid & Overdue." Send any necessary payment reminders.
2. Open the ****Project Tracker**** view "Active by Deadline." Identify the top 3 tasks for the day.
3. Check the ****Vault**** view "Needs Review." If any assets are awaiting client feedback, send a gentle nudge.

****Mid-Day Check (5 Minutes):****

1. Open the ****Time Log****. Ensure you have logged time for the morning block. If not, do it now while it's fresh.
2. Check the ****Client CRM**** "Pipeline" view. Is there a prospect that needs a follow-up email today?

****End-of-Day Shutdown (10 Minutes):****

1. Open the ****Time Log****. Log all time spent for the day.
